Say hello to a new age in door security.

Say hello to Yale Keyfree.

We are all used to unlocking our cars with a remote control, but wouldn't it be great if you could do the same with your front door?

Well now, thanks to Yale you can – with this brand new product only available on new composite doors from selected dealers.

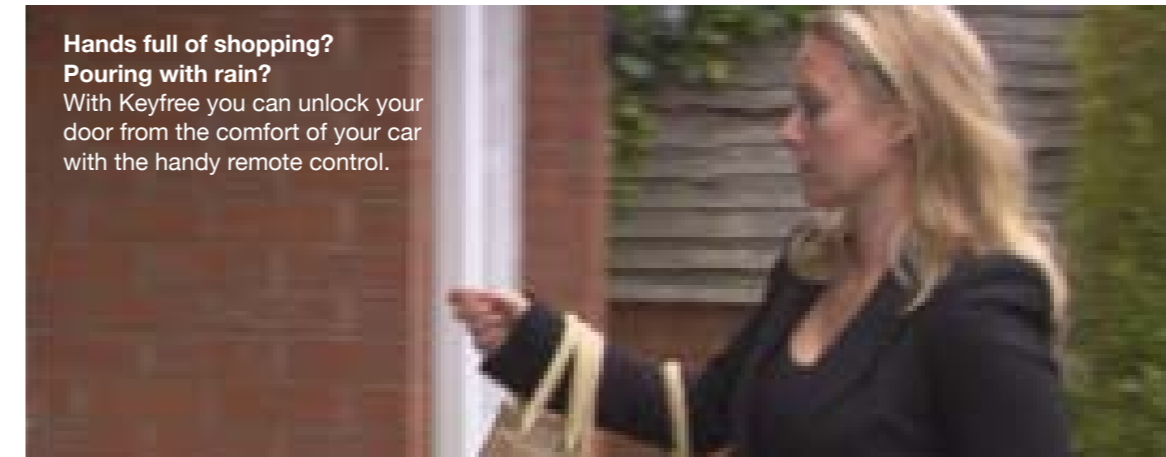

Keyfree is the very latest in door security from Yale, and combines peace of mind with convenience by allowing you to access and protect your property without a key.

Whether you use the remote control like your car, or enter your own 4-12 digit code into the built-in keypad, Yale Keyfree couldn't be easier to use – and because it's brought to you by Yale, you know it's technology you can trust.

With Yale Keyfree everything's covered. The unit is powered by it's own batteries - so even if the power fails it still works, it's backed up by an override key for emergencies and unless you ask it not to, it will even talk to you as you use it!

No more lost keys, no more rummaging in your bag and no more cutting keys for visitors – Yale Keyfree is the perfect way to make your new door complete.

Make sure your new door is fitted with Keyfree – and unlock the next generation in home security from Yale.

**Hands full of shopping?
Pouring with rain?**

With Keyfree you can unlock your door from the comfort of your car with the handy remote control.

No need to carry a key. Sometimes you don't want to carry a key around - particularly if you lead an active lifestyle. Whether coming home from a run or walking the dog, just type in a pin code for quick, hassle-free access.

No more forgotten keys. Do your children always forget their keys? Pin code access ensures this problem is eliminated and, if they forget the code, you can simply text it to them.

No need for spare keys. Whether it's a cleaner, a nurse or just a trusted neighbour – Keyfree saves all the hassle and expense of getting spare keys cut by letting you give them access with a separate visitor code.

No more hanging around. Your remote control makes Keyfree quick and easy to use. No more fiddly keys or scratched doors - just unlock your door with one quick press of a button.

Features and benefits

The remote control keyfob works up to 10 metres away.

Security matters

Feeling safe at all times is a must for any homeowner. Keyfree is enhanced by a number of special features, which ensure that you and your property are fully protected.

In case you are worried about exposing your pin, a 'fake' pin code system allows you to enter any number of digits to distract any onlookers. As long as you start or end with your pin code, you will be able to access your home.

Additionally, the door locks automatically behind you on the latch. You can fully lock the door by lifting the handle. If an intruder tries to attack the lock, it emits an 80-decibel alarm – enough to scare off any would-be intruders.

You can also arm the inside handle when you leave your home. If the inside lever is depressed the alarm will be triggered.

Quality and backup

Keyfree has been rigorously tested under extreme weather conditions, a hard-wearing product, fit for external use.

Keyfree has been designed to meet Secured by Design – a UK police initiative for safer homes.

A nine-volt battery terminal, hidden under the main body, serves as a backup power source. If all else fails, the product can be activated with a fail-safe mechanical key.

The Keyfree number pad lights up, so it's easy to enter your code at night.

Stylish security

Security and style go hand in hand – Keyfree makes a stylish addition to your front door.

Multiple Keyfree options

The remote control keyfob has a 10-metre range and is the quickest and easiest way to unlock your home.

Keyfree also allows you to create a 4 to 12 digit code via the keypad for everyday use, and create a separate visitor code for those times when trusted friends or family members need to access your home.

Intelligent innovation

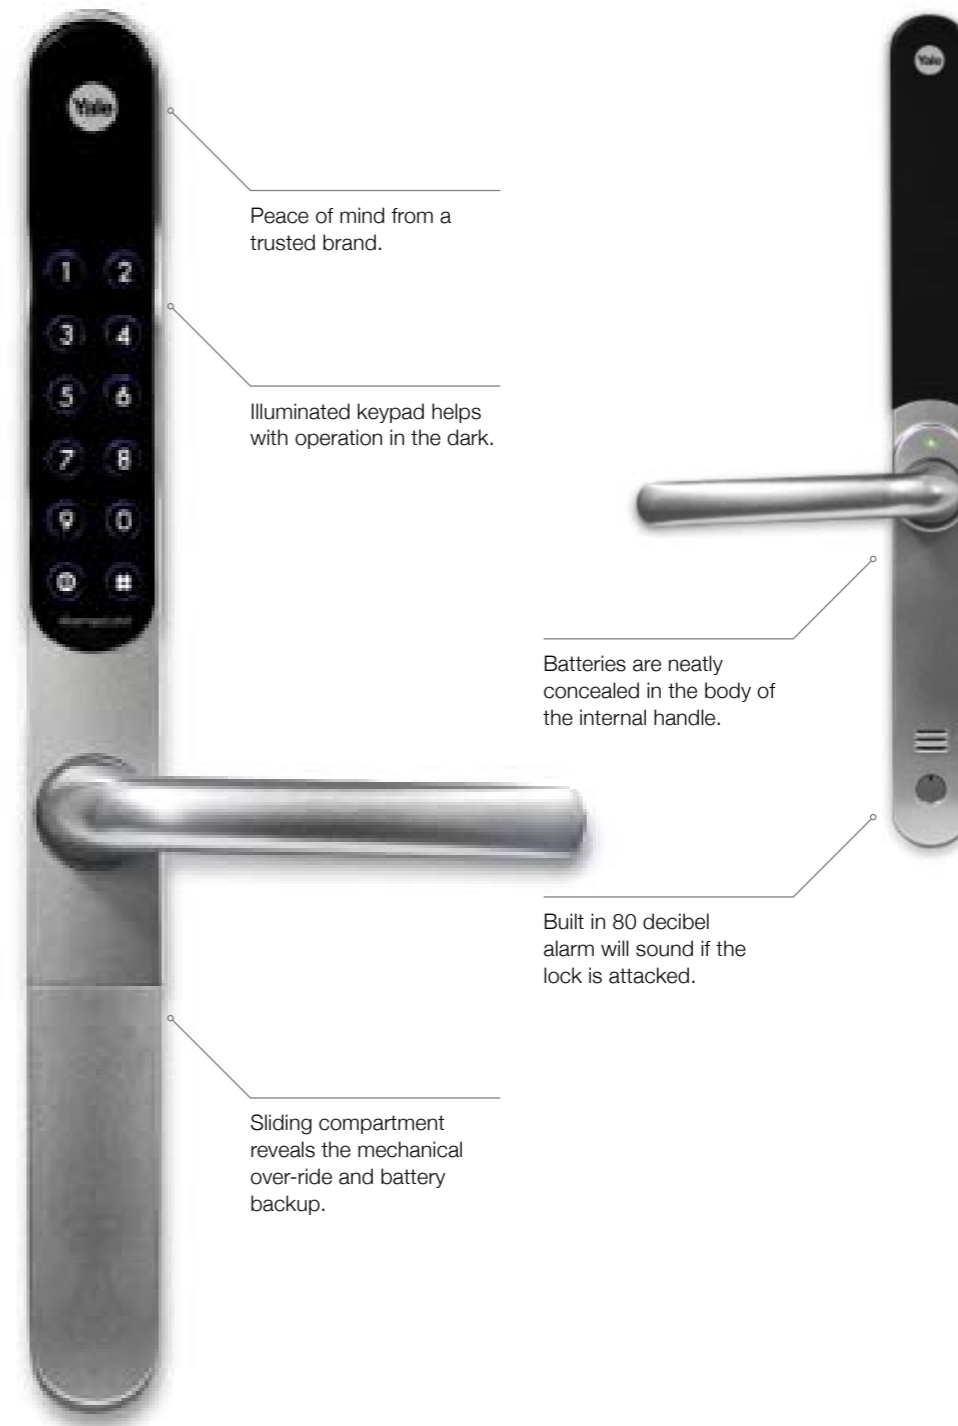

As well as multiple locking options, Keyfree actually talks to you. The device is enhanced with a voice notification, which prompts you when the door is locked, unlocked and if the battery power is low.

A light, located on the interior, also flashes red to indicate that the door is fully locked or warn you when it's low in power.

Trouble-free operation

Keyfree is a stand-alone, battery-operated unit is designed to last 12 months on average usage (approximately 5 operations a day). It requires no hardwiring or mains electrical support, which means no fuss or mess – so it can easily be fitted with your new front door.

Key features at a glance:

Peace of mind from a trusted brand.

Illuminated keypad helps with operation in the dark.

Batteries are neatly concealed in the body of the internal handle.

Built in 80 decibel alarm will sound if the lock is attacked.

Sliding compartment reveals the mechanical over-ride and battery backup.

Keyfree is also fitted with a mechanical lock and key as a safety over-ride feature.

Keyfree needs no complicated wiring, just four AA batteries and Keyfree tells you when the batteries are running low.

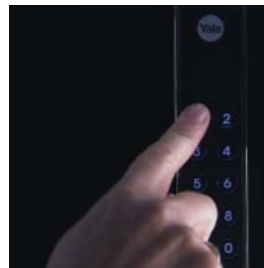

Keyfree has its own built-in 80 decibel alarm.

Frequently asked questions

Will any Keyfree remote control keyfob work with my door?

On installation, your installer will synchronise the keyfob with your door. The keyfobs are blank when you receive them and, once paired, will only work with your lock. There is no worry of another Keyfree user accessing your home.

What if I lose my remote control keyfob?

If you lose your keyfob, simply contact Yale via the Keyfree website www.yalekeyfree.co.uk. Here, you will be able to order new, blank keyfobs, which will then need to be synchronised to your door. The user guide explains how to do this. You can buy up to four keyfobs for your family.

Does Keyfree need to be hardwired?

No, it is a stand-alone unit, operated by four AA batteries, therefore you don't have to worry about electrical connections.

Why is Keyfree only sold on new doors?

Keyfree is the latest in digital home locking and is only compatible with the latest multipoint locking technology from Yale. As a complete locking system, it makes sure your home has the best protection.

A Keyfree model for retro-fitting to existing doors will be available during 2011, so please keep an eye on our website www.yalekeyfree.co.uk, for the latest news.

I'm worried Keyfree is too complicated. Is it really that straightforward?

Keyfree does include a lot of features, but they are all very easy to use, no matter how 'technology savvy' you are. All features have been designed to make your life easier, not to make it more difficult. A user guide will also be given to you upon completion of installation.

Can I add extra security to Keyfree?

Keyfree is designed to be secure and has the Secured by Design recognition, a UK police initiative for safer homes.

Some homeowners may also wish to add a door chain or letterbox protector, both of which are readily available through your professional door installer.

One feature of the Keyfree lock is that it does not 'deadlock' from the inside, in other words the door can be opened from the inside at any time by pressing the handle. This provides for a swift exit from the property in the event of fire or other emergency.

Are there child safety features built-in to the lock?

As the door can be opened from the inside at any time, Keyfree can be easily programmed with a "child safety mode", whereby the door alarm will sound if anyone presses the handle from the inside, alerting you to any risk.

Do I have to use the keyfob or keypad every time I go in and out of the door?

You can open the door from the inside at any time. To save having to use the keyfob or keypad to continuously open the door, for example when you are unloading shopping from a car, it is easy to programme Keyfree with a "safe passage" mode, so you can go in and out easily and then quickly re-set Keyfree to its normal settings when you are finished.

What happens if my lock breaks down?

Your door installer can help with any queries or you can contact Yale directly on . There is also an out of hours helpline on , which is to be used in the event of a lockout.

Your user guide also covers all possible situations. Please refer to this in the first instance.
